

Amendments to the Claims:

Please cancel Claims 2, 3, 5, 7, 8, and 13 through 24 without prejudice to or disclaimer of the subject matter recited therein.

Please amend Claims 1, 4, 6, and 9 through 12; and enter Claims 25 through 36 to read, as follows.

- Sub C1  
B
1. (**Currently Amended**) A toner supply container detachably mountable to an image forming apparatus, said toner supply container comprising:  
a container body for containing toner, said container body being provided with an opening for permitting discharge of the toner therefrom; and  
a feeding member, provided in said container body, for feeding the toner toward the opening,  
wherein said toner feeding member includes a rotatable plate-like member, which extends in a longitudinal direction of said container body, said plate-like member being provided with a projection extending so as to be inclined with respect to a rotational axis thereof to guide the toner on said plate-like member toward the opening with rotation of said plate-like member, and a through-hole for allowing the toner on said plate-like member to fall, thus stirring the toner with rotation of said plate-like member  
a main body for accommodating toner; an opening for permitting discharge of the toner from the main body;  
a rotatable feeding member, provided in the main body, for feeding the toner by rotation thereof;
- B

wherein the feeding member including a lift portion for lifting the toner in the main body, a guiding portion for guiding the toner lifted by the collecting portion downwardly toward the opening, and a falling portion for letting the toner lifted by the lifting portion fall without feeding it toward the opening with rotation of the feeding member.

2. (Canceled)

3. (Canceled)

<sup>2</sup>  
4. (Draft-Currently Amended) A toner supply container according to Claim 1 2;

3, wherein a plurality of such projections are provided at longitudinally different positions on one side of said plate-like member ~~the the guiding portion includes a plurality of projected portions inclined with respect to a rotation axis toward the opening.~~

5. (Canceled)

<sup>3</sup>  
6. (Currently Amended)

A toner supply container according to Claim 1 [[2]], wherein a plurality of such projections are provided at longitudinally different positions on both sides of said plate-like member ~~the lift portion and the falling portions on each side of the plate member.~~

7. (Canceled)

8. (Canceled)

(confid)*

9.<sup>4</sup> (Currently Amended) A toner supply container according to Claim <sup>3</sup> 8<sup>3</sup> [[8]], wherein said projections are provided on both sides of said plate-like member so as to effect toner discharging action twice for one full rotation of said plate-like member the feeding member is capable of feeding the toner toward the opening by its rotation in one rotational direction.

10.<sup>5</sup> (Currently Amended) A toner supply container according to Claim <sup>2</sup> 4<sup>2</sup> [[9]], wherein one of said plurality of projections is close to or contiguous with the opening the projected portions continuing to at one side of the plate member.

11.<sup>6</sup> (Currently Amended) A toner supply container according to Claim any one of Claims <sup>2 3 4</sup> 4, 6, and 9<sup>4</sup> [[1]], wherein said the feeding member rotates integrally with said container the main body.

12.<sup>7</sup> (Currently Amended) A toner supply container according to Claim <sup>6</sup> 11<sup>6</sup>, wherein the said container main body is substantially cylindrical.

Claims 13 through 24. (Canceled)

<sup>8</sup>  
~~25~~. (New) A toner supply container according to Claim <sup>7</sup>~~12~~, wherein said plate-like member is disposed so as to be in contact with or in proximity with an inside surface of said container body.

<sup>9</sup>  
~~26~~. (New) A toner supply container according to Claim <sup>7</sup>~~12~~, wherein said plate-like member extends substantially along a length of said container body.

<sup>10</sup>  
~~27~~. (New) A toner supply container according to Claim <sup>7</sup>~~12~~, wherein said plate-like member diametrically divides an inside of said container body into two substantially equal parts.

<sup>11</sup>  
~~28~~. (New) A toner supply container according to Claim 1, wherein a plurality of such projections are provided so as to be partly overlapped with respect to the longitudinal direction of said plate-like member.

<sup>12</sup>  
~~29~~. (New) A toner supply container according to any one of Claims <sup>2 3 4</sup>~~4, 6, 8~~, and <sup>11</sup>~~28~~, wherein the through-hole is disposed between adjacent ones of said projections.

<sup>13</sup>  
~~30~~. (New) A toner supply container according to either Claim <sup>2 3</sup>~~4~~ or <sup>3</sup>~~6~~, further comprising a hollow projection projecting from one longitudinal end surface of said container body having an opening at a free end thereof, wherein one of said plurality of projections is close to or contiguous with said hollow projection.

Sub  
C1  
unit

31.<sup>14</sup> (New) A toner supply container detachably mountable to an image forming apparatus, said toner supply container comprising:

a container body for containing toner, said container body being provided with an opening for permitting discharge of the toner therefrom; and

a feeding member, provided in said container body for rotation integrally with said container body, for feeding the toner toward the opening,

wherein said toner feeding member includes a rotatable plate-like member, which extends in a longitudinal direction of said container body, said plate-like member being provided with a plurality of projections, which extends so as to be inclined with respect to a rotational axis thereof to guide the toner on said plate-like member toward the opening with rotation of said plate-like member.

Sub  
D2  
(Conts)

32.<sup>15</sup> (New) A toner supply container according to Claim 31.<sup>14</sup>, wherein one of said plurality of projections is close to or contiguous with the opening.

33.<sup>16</sup> (New) A toner supply container according to Claim 31.<sup>14</sup>, wherein a through-hole, provided between adjacent ones of said plurality of projections, for allowing the toner on said plate-like member to fall, thus stirring the toner with rotation thereof.

34.<sup>17</sup> (New) A toner supply container according to Claim 31.<sup>14</sup>, wherein said plurality of projections are provided on both sides of said plate-like member so as to effect a toner discharging action twice for one full rotation of said plate-like member.

<sup>18</sup>  
~~35.~~ (New) A toner supply container according to Claim ~~31~~<sup>14</sup>, wherein said plate-like member diametrically divides an inside of said container body into substantially two, equal parts.

<sup>19</sup>  
~~36.~~ (New) A toner supply container according to Claim ~~31~~<sup>14</sup>, further comprising a hollow projection projecting from one longitudinal end surface of said container body having an opening at a free end thereof, wherein one of said plurality of projections is close to or contiguous with said hollow projection.~
